

**Editor's Comment:**

After meticulously reviewing the original manuscript and the comments of the assigned reviewers, I consider that the paper entitled: impact of Leaf Area Index on the Absorption of Photosynthetically Active Radiation in Barley (*Hordeum vulgare* L. ) crop under diverse sowing dates and cultivars, cannot be published, because the authors did not make the corrections suggested by the reviewers, which I consider relevant to improve the academic quality of the manuscript, so I consider that for its possible publication the authors must comply with the changes proposed by the reviewers.
